CHARGE AIR COOLERS

A malfunctioning charge air cooler (CAC) can affect power output and fuel economy – it can even lead to premature piston, ring, and valve failure. Avoid these issues and have confidence on the road with a Road Choice charge air cooler.

Featuring brazed-aluminum construction, our CACs offer excellent thermal performance and durability.

FEATURES AND BENEFITS

- Made from Industrial grade, furnace brazed aluminum alloys
- 100% air pressure tested to be leak free
- Guaranteed zero leak down during warranty period for better fuel efficiency*
- All new, no core charges

* Most manufacturers allow as much as 7-9 lbs. of leak down resulting in lower horsepower and more demand from the trucks engine and turbocharger.

CAC41285

CHARGE AIR COOLER TEST KITS

Road Choice Charge Air Cooler Test Kits give you confidence that your charge air cooler is performing at optimal levels. Testing Charge Air Coolers and other large heat exchangers can be both time consuming and risky without the proper equipment. With the Road Choice Charge Air Cooler Test Kit you'll be able to test your charge air cooler with ease.

Part Number: **CACTESTER**

WHY YOU SHOULD BE TESTING YOUR CAC'S

It's estimated that 40 percent of trucks on the road that are two years and older currently have charge air coolers that are leaking out of the engine manufacturer's specifications. The CAC should hold air for at least 15 seconds. If there is a pressure loss of 5 psi or more within the 15 seconds, the CAC is leaking and it should be replaced immediately.

Reasons to replace a marginally leaking charge air cooler:

- Power Loss
- Increased Fuel Consumption
- Elevated Soot Levels in the Oil
- Premature Piston, Ring & Valve Wear
- Elevated Engine Coolant Temps
- Turbo Charger Failure
- Exhaust Manifold Failure

RADIATORS

ROAD CHOICE® RADIATORS are designed to deliver superior performance and durability in the toughest of conditions and are able to increase productivity, reduce downtime, and extend the life of your truck or fleet.

The Road Choice radiator program offers a full line of bolt-on, soldered, and plastic tank aluminum construction radiators. With offerings for the most popular truck models, we have your needs covered. You can be confident that Road Choice offers a replacement to get you back on the road quickly. Every Road Choice radiator purchase is backed by a no-hassle 2-year, unlimited mileage, nationwide warranty from date of install.

ALL METAL RADIATOR FEATURES AND BENEFITS

- All connections are brazed to the tank creating stronger joints that last longer and are able to withstand excessive engine vibration and any flexing that may be transmitted through hoses.
- All surge tanks/bolt-on tanks and side frames are powder coated, which protects the radiator against rust, salt and corrosion, and rock chips, better than traditional paint.
- Heavy corner supports added for heavy-duty applications.
- All side rails are reinforced at the header joint for durability and protection against core "flexing" and thermal expansion.
- Built to meet or exceed OEM fit, form, function, and performance.

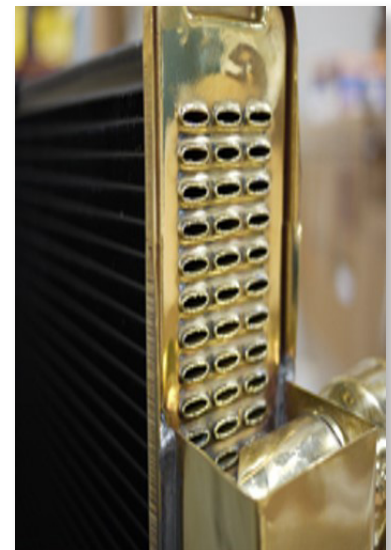

PATENTED ULTRA-FUSE® TECHNOLOGY EXTENDS RADIATOR LIFE UP TO 500%*

The Ultra-Fused® weld process fuses the base materials together by replacing the soldered tube-to-header joints with all TIC-welded joints. Our OEM radiator design also incorporates thicker, seam-welded tubes to further enhance durability in high-stress applications. Additional flexibility is built into the header to prevent cracking that can result from bumps, vibration and jarring road conditions.

We use our Ultra-Fused® tube-to-header weld process on the entire header for applications known to have issues with higher than normal wear and tear caused by racking and twisting stresses from the OEM frame. Lab tests have shown that Ultra-Fused® greatly reduces tube-to-header leaks and extends the overall radiator life expectancy by 5 times that of most standard designs available today.

*Ultra-Fuse technology is only available on our copper/brass radiator offering.

RADIATORS

PLASTIC TANK AND ALUMINUM (PTA) RADIATOR FEATURES AND BENEFITS

- All of our tanks are extra-thick and feature thick ribs. Each tank is constructed from new plastic instead of a re-grind or reclaimed plastic like the competition.
- All connections are reinforced to protect against engine vibration and over tightened hose clamps.
- Internal bracing on corners to support the tubes in vibration and flexing conditions.
- All tabed headers on the radiator are surrounded by a stainless steel tab to prevent the tab from lifting under pressure which could lead to premature gasket failure.
- Radiators feature round silicon based gaskets instead of popular of a flat neoprene "ribbon gasket" which can compress and eventually leak.
- Radiators come with hardware and install kits for most applications.
- Made from quality industrial grade materials, metals, and alloys.
- Built to meet or exceed OEM fit, form, function, and performance.
